Medical reasons:

*The injection can seriously injure or kill the injected.

*The injection doesn't prevent the SARS-CoV-2 virus infection.

*The injected can infect others.

*The injected can get more serious disease from SARS-CoV-2 virus as well as from other pathogens.

*It is an experimental gene technological injection, not a traditional vaccine.

*These gene technological injections include toxic lipid nanoparticles. They induce the human cells to produce toxic spike proteins that accumulate in the organs.

*The long term effects of these injections are unknown to everybody.
